## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 27-32, 38-42, 43-48, 54-58, 59-64, 70-74, 75-80 and 86-90, drawn to an isolated polynucleotide, a chimeric gene, an expression vector, a method for transforming a cell, and a cell, classified in class 536, subclass 23.6, for example.

---

If invention I is elected, restriction to a single nucleotide sequence and the amino acid sequence it encodes is also required under 35 USC 121. Therefore, if invention I is elected, a single nucleotide sequence and its corresponding amino acid sequence must also be elected.

- II. Claims 33-37, 49-53, 65-69 and 81-85, drawn to an isolated polypeptide, classified in class 530, subclass 370, for example. If invention II is elected, restriction to a single amino acid sequence is also required under 35 USC 121. Therefore, if invention II is elected, a single amino acid sequence must also be elected.

The inventions are distinct, each from the other because of the following reasons:

The isolated polynucleotides of Invention I are unrelated to each other. The isolated polypeptides of Invention II are also unrelated to each other. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the

Art Unit: 1638

instant case the nucleotide sequences of Invention I represent structurally different polynucleotides, and the amino acid sequences of Invention II represent structurally different polypeptides. Therefore, where structural identity is required, such as for expression or hybridization, the different sequences have different effects.

Inventions I-II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation and different functions. The polynucleotides of Invention I and the polypeptides of Invention II have different structures and functions.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter, and the requirement for different areas of search, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
